# Brian Cameron, Professor and Executive Director Center for Enterprise Architecture, Founding President FEAPO

Brian Cameron is founding President of FEAPO, the Federation of Enterprise Architecture Professional Organizations. In addition, Brian is Professor of Practice and Executive Director of the Enterprise Architecture Initiative in the College of Information Sciences and Technology at the Pennsylvania State University. Within the College of Information Sciences and Technology, he works with a wide portfolio of companies on a variety of consulting engagements, ranging from systems integration projects to enterprise architecture planning and design. Through his academic work, Cameron has consulted with organizations such as Avaya, AT&T Wireless, Raytheon, Accenture, Oracle, EMC Corp., NSA, U.S. Marine Corps, The Pennsylvania Department of Transportation, and many others.

His primary research and consulting interests include enterprise architecture, enterprise systems integration, information management and storage, and the use of simulations and gaming in education. The main focus areas for his teaching efforts are senior-level capstone enterprise integration, enterprise architecture, and information technology consulting & storage architecture courses. Dr. Cameron is currently developing new curricular materials for enterprise integration (through funding from NSF), including a textbook to be published by Wiley & Sons Publishing. He has also designed and taught executive education sessions for senior IT executives. Session topics include Service-Oriented Architecture (SOA), Business Process Management (BPM), Strategic Alignment of IT & Business Strategies, IT Governance, and IT Portfolio Management.

Dr. Cameron currently leads corporately funded research efforts in the following areas: service-oriented architecture and business process modeling, risk analysis and management of enterprise systems integration projects, Enterprise Resource Planning (ERP) implementation best practices, enterprise storage & information management architecture design, and performance measurement for Enterprise Architecture.
